Australia's Changing Harvest

Compare Australia's fruit, vegetable and nursery industries across regions and financial years. Which industries and regions drive the change? Does more value mean more output?

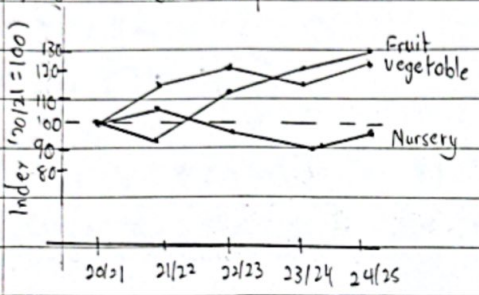

Fruit	Vegetable	Nursery
$7.34b	$6.03b	$2.76b

Growth. Geography · Output · Markets · Sources

(01) Fruit and vegetable values rise, nursery remains below 2020/21.

From 2020/21 to 2024/25, fruit value rose 25.4%. Vegetable value rose 23.0%, nursery fell 1.2%

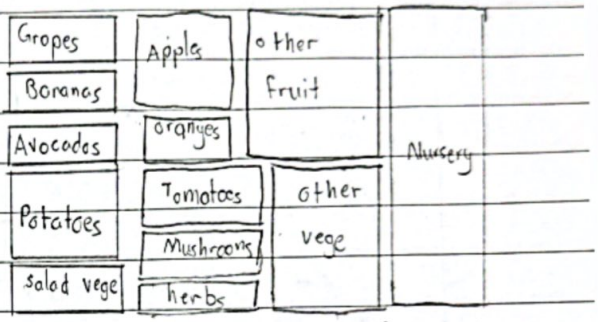

1) Indexed value and output of 3 sectors

Compare: Value / value output

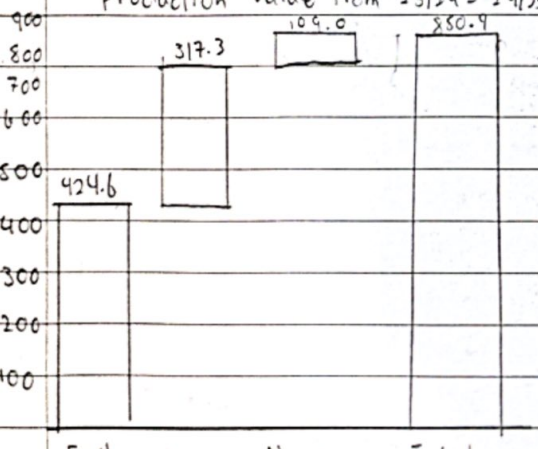

Index compares relative change which shows fruit and veg increase compared to 20/21 but nursery drops

2) Production value of each sector

Shows the leading types for fruit and vege while showing which sector has the highest value

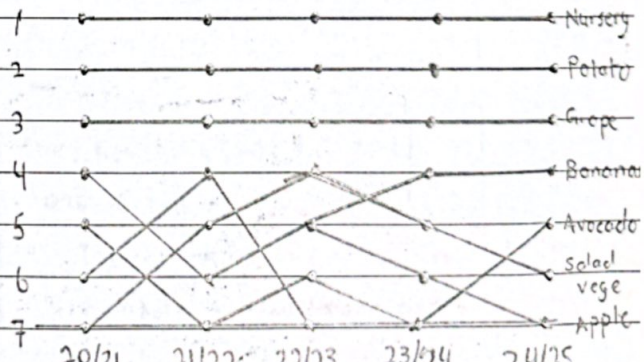

3) Contribution of each sector to production value from 23/24 - 24/25

Fruit Vege Nursery Total

Fruit contributed the most while Nursery contributed the least

4) Ranking leading industries across sectors

Industry: All Industries

Rankings are based on production value, showing the top 3 are always the same which are nurseries, potatoes and grapes

Subject: No: Date:

(02) National totals hide regional differences

Compare state production values, avocado output per hectare. Explore where nursery value is concentrated

5) Estimated production value by state

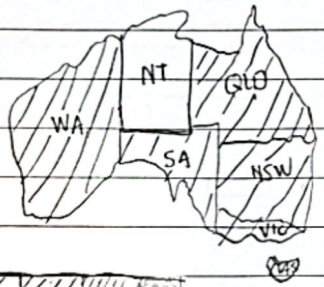

AUD million

○ 100 ○ 1000 ○ 2500

Sector: Fruit ▼ Year 2024/25 ▼

Circles are near state centre, showing major states produce more

6) Avocado output per hectare

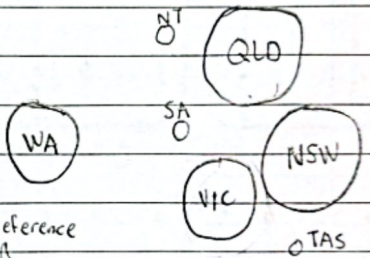

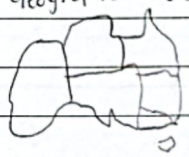

Year: 2025 ▼

Production each year changes for each region

7) Nursery production value by state

Geographic reference

Production Value (AUD million)

○ 25 ○ 100 ○ 250

The majority of nursery production is contributed by Queensland and New South Wales

(03) More dollars can accompany less produce

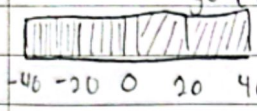

In 2024/25, vegetable value rose 5.6%. Its output fell 1.4%

Compare dollar growth with changes in physical production

8) Growth of each sector each year compared to 2020/21

	21/22	22/23	23/24	24/25
Nursery	+1.6	-2.8	-4.6	+4.1
Potatoes	+2.8	+24.5	+6.8	+9.8
Grapes	+14.3	+27.2	+18.2	+15.4
Bananas	-16.0	+16.3	+19.6	+3.1
Avocados	-25.6	+54.1	+5	+22.6

Annual change (%)

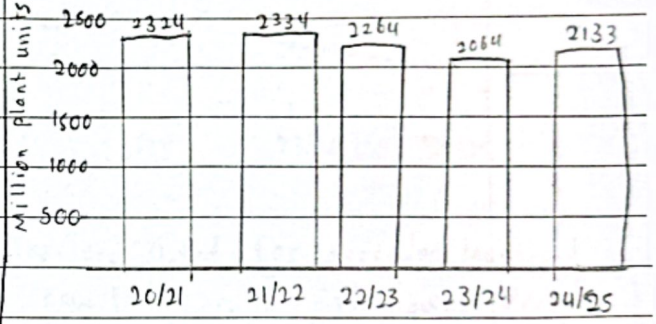

All values are percentages. It shows how yearly value fluctuates

9) Physical growth against value growth

Higher output does not always mean higher value and vice versa

10) Nursery output each year

Output roughly remains the same and even with a decrease, it bounced back next year

(04) Markets and growers shape the industry

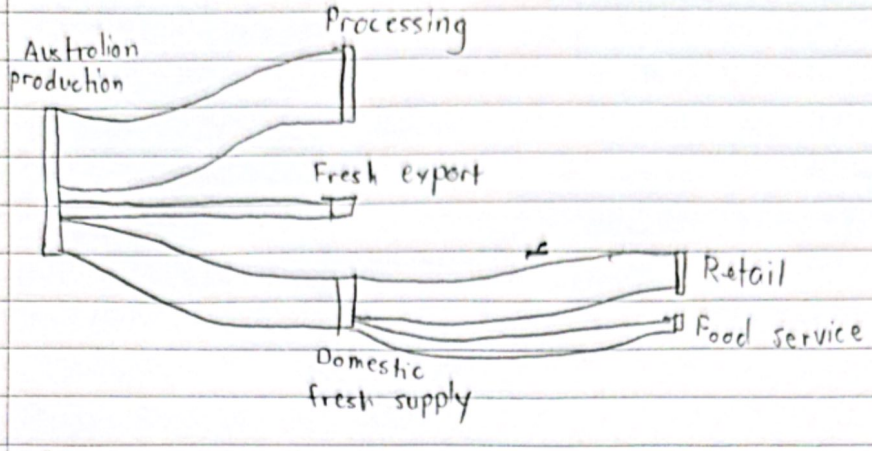

Follow potatoes into processing, export and fresh markets. Compare shares, avocado land and grower numbers

Subject: ↓ No: Date:

11) Potato production process

A majority of the potato production goes into processing and little into export

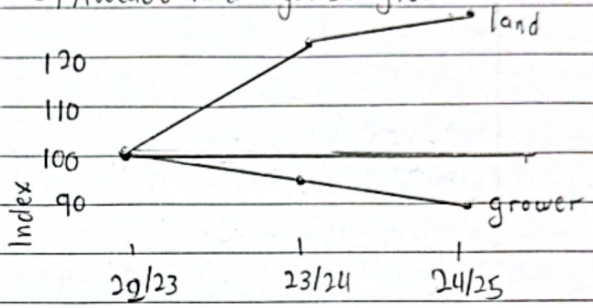

12) Export for each sector

F	F	F	F	F
F	F	F	F	F
F	F	F	F	F
F	f	F	V	V
V	V	V	V	N

F: Fruit V: Vegetable N: Nursery

The fruit sector exports the most and brings in most value

13) Avocado land against growers

The land used for avocados increased even though number of growers decreased

Conclusion: Read value, output and place together
